

Lucas Leonel Galardo Euler

Senior developer · Games & systems · Web / SaaS San Telmo, Buenos Aires, Argentina · Remote [Portfolio](#) · [GitHub](#) · [LinkedIn](#) · [All links \(Linktree\)](#)

Profile

Developer with **10+ years** of experience, both as a developer and as a **tech lead**. My core is **C#** and the design of **systems decoupled from the engine/platform architecture** so they can port across — which is why I move comfortably between **games, web/SaaS and low-level work**. Strong in gameplay, architecture and performance; I drop to C++/HLSL/Assembler when the problem calls for it. I lean on my own reusable tech to ship fast: a complete multiplayer game in ~1 month.

What I do

- **Games** — gameplay, physics, **game AI** (hierarchical FSM, sight + sound perception) and **networking across two independent stacks** (Netcode for GameObjects; Photon Fusion 2 for a freelance client) — two different netcodes double as proof that **the systems are decoupled from the engine** and port across. Graphics and tooling; I work mostly in Unity (URP, Shader Graph, HLSL) and drop to **low-level work** (C++, DX11, Assembler) when needed.
- **Web full-stack / SaaS** — years of production **PHP/MySQL**; more recently, **Tech Lead** of a multi-layer SaaS platform (React/TS + serverless on Supabase/PostgreSQL with per-tenant RLS + a **custom Node.js runtime layer** for what serverless can't sustain). Includes **multi-model AI orchestration** with cross-provider fallback — the AI interprets, while base metrics are computed in code.
- **Generative / applied AI** — my own image-generation service with local GPU orchestration, a LoRA training pipeline and dataset generation, built end-to-end; and daily work with **multiple AI models** integrated into my development workflow.
- **Engineering rigor** — architecture invariants that verify themselves (a lint rule + a runtime guard) and a layered testing harness, so guarantees hold as the system grows.
- **Technical education** — instructor for the advanced Unity levels at a 3,400+ student academy; 40+ private students of my own (multi-stack); author of curricula.
- **Process / tech-lead** — my own task/spec management methodology (with branch governance) and AI-assisted development with custom tooling.

Public projects

- **La Maldición: Héroes de Lorthar** — competitive multiplayer card game, playable WebGL build: [itch.io](#). Tech lead; **custom binary serialization** (indexed, allocation-free on the hot path) over Netcode for GameObjects.
- **Common-Package** — my own suite of ~36 reusable production Unity systems (18 formal UPM packages); several **sold and licensed to other developers, with recurring billing**. Leveraging it, I delivered a **complete multiplayer game in ~1 month** ([case study](#)).
- **Compute shaders HLSL on DX11** — a C++ library that compiles compute shaders at runtime on DirectX 11 (native Unity↔C++ interop); included hypothesis-driven debugging of a silent GPU bug with three root causes (per-frame UAV recreation, cross-thread sync, and constant-buffer alignment).
- **Portfolio + shader playground** — [agaskhan.github.io](#)

Skills (summary)

C# · C++ · TypeScript · PHP · Python · HLSL · SQL · Unity (URP, Burst, Jobs, Shader Graph) · Netcode / Photon Fusion 2 · React · Node.js · Supabase / PostgreSQL · DirectX 11 · Git / CI-CD · Docker · Linux

Experience (summary)

- **Nexio** — Brought in to review the codebase architecture, I grew into **Tech Lead / Product Engineer** of the multi-channel SaaS platform in production (nexio.land). 2026 – Present.
- **Somos Leyenda** — Unity technical consultant (audits, partner track) (*Contract*). 2025 – Present.
- **Lifecole** — Instructor for the advanced Unity levels + curriculum author (*Part-time*). 2021 – Present.
- **Freelance** — Games (a published competitive card game), real-time multiplayer and custom backend/integration systems (*Part-time*). 2015 – Present.
- **Wilson Champ S.R.L.** — Embedded development (C/Assembler) + full-stack web (PHP/MySQL) over years. 2015 – 2021.

Education

- **Virtual Simulator Design & Programming** — Da Vinci (2021–2025) · Top of class, GPA **9.69/10**.
- **Shaders for Video Games** — Image Campus (2025).
- **Electronics Technician** — Colegio San José A-355 (2008–2014).

Languages

Spanish (native) · English (Professional Working Proficiency)

*Public short version — I deliberately left out phone and email to avoid exposing them to scrapers.
For the full CV with contact details, reach me on [LinkedIn](#) or via [Linktree](#), or ask when applying.*
